Sushi's Sushi API `1.0.0` `OAS3`

The API is designed to handle and manage all aspects of an online sushi ordering system. Users will be able to create and customize their orders, add items to their cart, and manage the checkout process through the API's endpoints. Additionally, the API will provide tools for managing menu items, such as creating, updating, and deleting items as needed. Users will be able to access the API through the online sushi ordering platform, allowing for seamless integration and a streamlined user experience. Overall, the API's purpose is to facilitate the online ordering process and provide a user-friendly interface for customers to order and personalize their sushi selections.
